EMPLOYABILITY STATUS OF BSCPE GRADUATES BATCH 2008-2012 OF JRU

Rosalina R. Estacio
Computer Engineering Department
College of Computer Studies

The escalating need to produce competent computer professionals who can keep abreast with rapid changes in the field of information technology and engineering is a critical challenge for HEIs offering ICT related programs. Computer engineering as a discipline integrates core knowledge of both hardware and software in the design, development, implementation, maintenance of computer controlled systems and applications proliferating today in all facets of business/industry. This investigated how graduates of the BSCpE program of JRU scored in the employment market and how target program outcomes, skills/competencies and subjects in the curriculum have been practiced and applied to their jobs. Results of this study may provide vital information to continuously improve the curriculum and overall academic preparation that students need to have to become highly qualified professionals.
